

Issue #	Category	Module	Found in Release	Title	Release Note
27681	Product Bug	Charts	4.3	An error occurs in [Save as] operation of Charts	This was an intermittent problem related to many different status values being chosen. Now fixed.
28443	Product Bug	Layout Rendering	4.3	Suppressing blank rows on layouts does not work with CUSTOM type display fields	This has been fixed
29538	Feature Enhancement	Search / Report	4.3.3	A message box is displayed with [Ok] and [Cancel] buttons but there is no text message.	This occurred when you checked on [Delete] button, to delete a report from Custom URL report page. Now fixed
29575	Product Bug	Search / Report	4.3.3	QA_B33_SQL_Vrg_Query-Create New Custom URL Report-GO-Enter Title, Description and URL-SAVE-RUN (my reports)-Observe java.lang.reflect.InvocationTargetException	You must supply the class and method to run via p_option and p_action for a CustomUrlReport. We now stop the user saving a report with a blank URL, and there is a new message that indicates that it is the user's responsibility to provide a valid URL, as we cannot check for this.
29621	Feature Enhancement	Administration	4.3.2	Email addresses are optional only if EMAIL_NOTIFICATION is set to YES	When email is turned off with the behavior setting named EMAIL_NOTIFICATION, then the email address for users in the add / edit screen for users is no longer required.
29782	Product Bug	Configuration Management	4.3.2	CSS file structure has been altered	CSS files are now provided with each set of images, so that when an administrator selects a different set of images with the IMG_HOME setting, then a better set of styles are immediately provided. The administrator may still provide their own CSS files by specifying the CSS_HOME directory as a behavior setting
30049	Product Bug	Attachments	4.3.2	Bizarre file attachment names can be created	This was an issue with users who used Firefox as their browser only. Firefox does not seem to adhere to the correct spec. We worked around this so that the file names entered into our database are consistent and what the user has selected.
30076	Feature Enhancement	Administration	4.3.2	New feature to provide a password expiry period	The administrator can now set a global period within which each user's password will expire. The administrator can also override this when administering any user account, and can immediately expire the password, or set a period, in days, for the password to expire

Issue #	Category	Module	Found in Release	Title	Release Note
30311	Product Bug	Home Page	4.3.2	Problem with screen transition if Chart is placed on the Home Page as a report	This only happened under the circumstances where your only home page report was a chart, and you used the title bar option to change your role, and you then canceled from that screen. Under these circumstances, the Home Page was displayed without the title bar
30317	Product Bug	Layout Editor	4.3.2	Problem with multiple line repeating record layout	In a repeating row layout, with multiple rows, if the second or subsequent rows were using a colspan of 2 or higher on a field, the field label would appear in the wrong position. This has been corrected
30320	Product Bug	Administration	4.3.2	Problem with screen transition of File Import Utility	When canceling from the summary screen of the file import utility, you were taken to the entry screen of the file import utility, as opposed to going back to the main working page. This has been corrected.
30360	Product Bug	Search / Report	4.3.2	Using "empty" as an operator in the conditions of a query does not work	This was a bug in advanced querying, stopping the use of "empty" as a filter in producing a report. Now fixed
30408	Product Bug	Search / Report	4.3.2	Specifying multiple Query Filters with "union", "minus" or "intersect" conjunctions	These conditions were not being saved properly in the query construct, and were not being used when running saved reports. Now fixed
30445	Product Bug	Search / Report	4.3.2	Display and sort order columns get cleared when using Advanced Query filters while creating a Column Report	To reproduce: <ol style="list-style-type: none"> 1) Select a few columns to display on report 2) Select the sort order for the report 3) Select to use Advanced Query filters 4) When selecting the first query filter field and the screen refreshes, the columns selected to display on report and the columns selected for sort order on the report get cleared and *None* only appears in the two lists
30461	Product Bug	Layout Rendering	4.3.2	Log Area timestamp runs into previous comment	This has been repaired This was a minor formatting error where there was not always enough space between the end of one comment and the beginning of the timestamp on the next comment
30465	Feature Enhancement	Administration	4.3.2	New feature to display the title of each field in the Layout Editor Screen	Beneath the data dictionary field name, the title to the field is now displayed

Issue #	Category	Module	Found in Release	Title	Release Note
30588	Product Bug	Administration	4.3.2	Selecting multiple user roles including "ALL" on Grant Security Privileges	Although it was not valid to choose *All* plus individual roles, you could do so. The program did not return the correct results. You are now warned if you attempt to choose *All* roles plus any one or more other roles
30592	Product Bug	Administration	4.3.2	Created By and Last Updated By fields have incorrect information displayed after the creation of the new user account	This was showing the user's name just created, as opposed to the name of the person who created the account
30601	Product Bug	Layout Editor	4.3.2	2-25 Error generated if LAYOUT.XXX is set to be displayed in Quick Report and Detailed Report	Embedded layouts are not currently supported within report layouts. They were appearing on the list of potential objects that could be included though. These layouts can no longer be embedded.
30628	Product Bug	Search / Report	4.3.2	Issues with the previous date are selected when doing Advanced Query using a date field as its Query Filter	This issue could be seen when working with multiple timezones. A correction to the right timezone for displaying issues was not always being done with advanced query filters on column reports
30631	Product Bug	Search / Report	4.3.2	Problem on screen display when multiple query conditions are specified for the Query Filter of Advanced Query Screen	After specifying two search conditions in Query Filter, if a user sets "*" Select "*" for Select Field as the first search condition , then deletes the condition, the second search condition is switched to be appeared on the top. However, the conjunction which showed the relationship between the two conditions still remained. This has been fixed.
30635	Product Bug	Search / Report	4.3.2	Issue with the previous date selected if a Summary Report if drilled down specifying a date field for summary field.	When a user selected a date field for "Select fields to summarize" in Summary Report and clicks [Run Report], the "Summary Reports" screen is displayed. If [Drill Down To Items] is clicked on that screen, those issues which have the previous date of the specified one are listed in Quicklist. Fixed.

Issue #	Category	Module	Found in Release	Title	Release Note
30639	Product Bug	Add & Edit	4.3.2	Problem with date format conversion	If the date format of Personal Options is set to "Full w/time" or "Full", and a user enters a day value from 1 to 12, the date is correctly displayed with "MM/DD/YY" format in "Add issues" screen. However, the date will be wrongly displayed with "YYYY/MM/DD" format in the "Edit issues" screen using the same order as those digits appear on "Add issues". It is correct if the specified day was a higher value than 12. Repaired
30641	Product Bug	Add & Edit	4.3.2	Inconsistency with Layout selection in Add issues screen when you change between areas	When REMEMBER_BETW_TABS is set to YES, and you have multiple areas, each with multiple projects, when you press the Add button, you are taken to your default area and project, showing the appropriate layout. If you then changed to a different area and implicitly a different project, and then change back to your default area, the layout for the project 0 within the area is displayed, as opposed to the one you left. This is actually the correct, though not the expected behavior. The reason is that projects are unique across all areas, whereas other fields are unique across the entire system. The behavior has been changed to always return the user to their default project, to obtain consistency.
30669	Product Bug	Search / Report	4.3.2	Using "remember last value" on user fields, won't let you change to a different value if selecting a value refreshes the screen	This has been fixed
30674	Product Bug	Search / Report	4.3.2	Search condition changed at drill down when running a saved report	After creating advanced search filters on a summary report, then saving the report, any filter that was '<>' was altered to a =. This has been fixed
31058	Product Bug	Attachments	4.3.2	QA_B42_SQL_Vrg - In Add Issue Screen Attachment window MANDATORY FIELDS(Description and File) are not displayed in RED COLOR.	Required fields on the add attachment window were not shown with the required field colors
31073	Product Bug	Search / Report	4.3.2	SR_PUBLIC_REPORT key not checked on Home Page Reports	This made it possible to view a public report, when you did not have permission. However, field level security still prevented the user from seeing information he did not have permission to view.

Issue #	Category	Module	Found in Release	Title	Release Note
31101	Product Bug	User Interface Issues	4.3.3	Fixed name and Title to Display are displaying in normal color but needed to display with highlight	This was on the module the administrative screen for module types
31169	Product Bug	Relationships	4.3.2	Problem on creating a relationship group	A bug was introduced in v4.3.2 where the relationship group button could not be viewed on the edit issue screen. This was fixed
31315	Product Bug	Charts	4.3.3	Editing a saved line chart with \$\$\$SYSDATE\$\$ as end date loses date	When a user did this, the start and end dates became the same. Fixed
31347	Product Bug	Add & Edit	4.3.2	DEFAULT_STATUS behavior setting is now deprecated	This was used on add issue forms, when there was no STATUS field on the form. This made sure that issues were always created with a default value. Now, the default value for the field is taken from the data dictionary
31749	Product Bug	Database	4.3.4	Duplicate project names can be added	It was possible to add different projects under different areas with the same title. This could lead to the wrong interpretation of results when using this field as a filter on reports. A decision was made to not allow the project title to be duplicated.
31839	Product Bug	Charts	4.3.3	Bar chart formatting issues	Bar charts now have the first column shifted to the left to better present the results. Also, multiple bars for different series on bar charts could have some bars presented to the right of the x-axis. Problems with presenting date ranges were also present. Now fixed
31868	Product Bug	General code issues	4.3.3	External email addresses fail in CC Email field	This refers to email addresses of the form name@domain.com. These were being ignored in the CC Email list, but by spec should have been valid. Now fixed
32014	Product Bug	Relationships	4.3.4	2-220 Show relationship groups that have Closed issues	When the checkbox "Show relationship groups that have Closed issues" in Relationship Group Maintenance screen is checked, ExtraView should display relationship groups which include issues that have been closed. However, even if the checkbox is not checked, those relationship groups are displayed when all of the issues in them are Closed. Fixed.

Issue #	Category	Module	Found in Release	Title	Release Note
32029	Product Bug	User Interface Issues	4.3.3	It appears we are appending .0 to number fields.	This issue originated in v4.3.3 and has been fixed
32122	Product Bug	Add & Edit	4.3.4	A layout with no fields causes exceptions	Although there is very little reason to ever have a layout without fields, this has been fixed so as not to cause an exception
32134	Product Bug	Notification	4.3.3	A new behavior setting named EMAIL_NOTIFY_USERS_ALWAYS created to control how users are notified	This behavior setting has been created for backwards compatibility. In 4.3.3 we introduced the behavior to suppress email notifications to users when none of the fields have altered. For some reason, some companies prefer to send notification to users when nothing changed, except the timestamp. This behavior setting introduces the capability to send notification with the old method.
32357	Product Bug	Layout Rendering	4.3.3	Assigned_to field empty on initial add screen load when it should have contained a default value	Fixed.
