

Issue #	Category	Module	Found in Release	Title	Release Note
16463	Feature Enhancement	Add & Edit		Allowed Value enhancement with pop-up field display types	Parents of allowed values can now be fields with a POPUP display type. When a user alters the value of the POPUP field, there is a screen refresh that triggers the population of the child list.
30429	Feature Enhancement	Add & Edit		create new data type DECIMAL and CURRENCY	Two new display types for fields have been implemented, the CURRENCY and the DECIMAL types. Their use is self-explanatory, but please see the Admin Guide, version 4.3.6 for full information
34051	Feature Enhancement	Add & Edit		The title of the "Add to Database" button has been altered to "Submit"	The label on the button to submit a new issue has been altered from "Add to database" to Submit.
29635	Product Bug	Add & Edit	4.3	Edit an issue-Manage Relationship Group-Click on [RETURN] button, error in Log Files showing java.lang.IndexOutOfBoundsException	The button to manage relationship groups has been removed from the add confirmation screen to solve this problem. This is not needed at this point of any process.
32592	Product Bug	Add & Edit	4.3.3	Could not set the module field on the edit screen to a value of *None*	This has been fixed.
32796	Product Bug	Add & Edit	4.3.3	Project field may be mis-aligned on edit screen	When the user did not have permission to the AREA field, and only the PROJECT field was being rendered on the screen, the project field was displayed at the right of the button row on the screen, as opposed to being displayed on a new row. This has been fixed.
32799	Product Bug	Add & Edit	4.3.3	Project missing on edit screen when read-only	When the PR_RESOLUTION.PROJECT field was set to Read-only on an edit screen, the Project field did not appear on the edit screen. This is fixed.
33194	Product Bug	Add & Edit	4.3.5	RELATIONSHIP_GROUP_EMAIL_LIMIT did not work correctly	The upper limit to stop email being sent to more than a specific number of users was not being respected
34023	Product Bug	Add & Edit	4.3.5	Release found field within a repeating record required a popup menu to populate the values	The fields RELEASE_FOUND and RELEASE_FIXED fields now operate correctly with all LIST and POPUP display type options.

Issue #	Category	Module	Found in Release	Title	Release Note
32238	Product Bug	Administration	4.3.4	After creating a UDF with an "alias of" setting and then trying to delete the UDF causes the application to hang	This was a SQL Server only problem, and like other similar issues, due to the poor way that SQL Server handles locking in the database. Now fixed.
32661	Product Bug	Administration	4.3.4	When the setting the USERNAME_DISPLAY to "FIRST" or "LAST", an error occurred when entering the Owner of the Field List and updating	The problem occurred after setting the behavior setting named USERNAME_DISPLAY to either FIRST or LAST. After setting this, if you edited a list, and tried to set the field owner, the change would not be accepted. This has been fixed
32831	Product Bug	Administration	4.3.4	An error occurred on the user account maintenance screen when address fields with more than 40 bytes were entered	This only affected double byte languages, where the 40 bytes of length were only offering about 14 characters. Now, all administration utilities check the input length in a consistent way, and allow long strings (up to 3,800 bytes) to be entered
32924	Product Bug	Administration	4.3.5	The email address within the user maintenance window was required, no matter the setting of EMAIL_NOTIFICATION	This only happened if EMAIL_NOTIFICATION = NO and CHECK_EMAIL_ADDRESS_FORMAT = YES. Now fixed.
32929	Product Bug	Administration	4.3.5	Sort Sequence is a mandatory field on the Administration Menu Title screen, but was not shown with the required field attribute	This was purely a cosmetic issue on the Administration Menu Title screen
32938	Product Bug	Administration	4.3.5	Some data dictionary fields did not allow the setting of "\$" as their default value	This only affected List, Tab, Popup, User and Checkbox fields. It would be highly unusual to see a "\$" as a default value for any field
32939	Product Bug	Administration	4.3.5	The title of Relationship Groups could not be modified	This occurred on the release group maintenance page and has been fixed.
32941	Product Bug	Administration	4.3.5	Could not display characters from "<" to ">" in list item titles	HTML "unsafe" characters may now be included in list item titles
32946	Product Bug	Administration	4.3.5	Could not display "'" or '>' correctly in a the data dictionary help text field	Now fixed

Issue #	Category	Module	Found in Release	Title	Release Note
33000	Product Bug	Administration	4.3.5	The contents of the Description of a layout were occasionally lost when returning from the layout attribute window	This only occurred with extremely long descriptions. There was no loss of the title, as the layout could not be saved without restoring the text. Now fixed.
33007	Product Bug	Administration	4.3.5	Titles in the layout editor could be erased from the screen after accessing the layout cell attribute screen	Clicking on the layout element attribute link button will now bring you to a new popup window, and the underlying layout editor window is refreshed when the administrator has completed his operations in the popup.
33013	Product Bug	Administration	4.3.5	Popup list fields would only work with values of 100 bytes or less	Although it is highly unusual to see display titles of more than 100 bytes, this has been fixed so that in a localized instance, up to 3800 characters will work correctly in a popup display field
33191	Product Bug	Administration	4.3.5	RELATIONSHIP_GROUP_LINK field is not available on add and edit layouts	A previous upgrade mistakenly removed the security key for this field. This has been restored
33232	Product Bug	Administration	4.3.5	Could not localize an English message in the "Status Change Rules" screen	The message "Lose current Status Rule values and inherit?" was not localizable. Now fixed.
33367	Product Bug	Administration	4.3.2	Guest users were taking up licenses	This was only occurring on installations where concurrent licensing was in effect. Given most ExtraView installations have an ample number of licenses and limited numbers of customers making concurrent accesses, this was not spotted previously.
33534	Product Bug	Administration	4.3.5	Could not delete a user role with MS SQL when in the Japanese locale	Now fixed
33984	Product Bug	Administration	4.3.5	The setting of EMAIL_ADMINISTRATOR_NAME does not reflect to "From:" of the email	There was a problem in the mail encoding of the name. The administrator would have seen ALERT messages in the log, like "Illegal syntax". Now fixed.
34159	Product Bug	Administration	4.3.5	The behavior setting named BORDER_WIDTH has been deprecated	This setting is no longer used and has been removed from the database

Issue #	Category	Module	Found in Release	Title	Release Note
34165	Product Bug	Administration	4.3.5	The behavior setting named "PASSWORD_EXPIRE_TIME_DAYS" did not behave correctly when adding a new user	This was being set at 0 and not the number of days specified in the behavior setting. Now fixed.
34316	Product Bug	Administration	4.3.6	Incorrect error message when attempting to enter an invalid security key name	When a security key was created, it was being validated as a standard database name, as opposed to validating that it could be up to 100 characters in length and could also contain a '.' as a valid character. Fixed error message.
34380	Product Bug	Administration	4.3.6	Altered description of behavior setting named REPORT_LABELS_POSITION	The on-screen text and documentation for this behavior setting had the meaning of "TOP" and "LEFT" reversed. This has been corrected.
32793	Product Bug	Allowed Values	4.3.4	When selecting the RELEASE_FOUND_HIST as child value or parent allowed value, the selected values are not displayed	There were several fields in the list offered on the allowed value screen which were not eligible to be either parents or children in allowed value lists. These fields have been inhibited from being displayed, so they can no longer be selected.
33083	Product Bug	Allowed Values	4.3.4	Allowed value did not refresh properly when changing areas when the parent field was PROJECT	This has been fixed. The behavior was that the PROJECT would always go to the default value, rather than the current one
33744	Product Bug	API & CLI	4.3.5	Server-side templates will not allow the uploading of files	The ability to upload server-side templates would not run on Linux host computers, although it ran successfully on Windows servers. This has been fixed.
33975	Product Bug	API & CLI	4.3.5	Display type of "Print Text" did not get returned in the xml from the "run_report" API call	This problem resulted in two fixes, one to fix the API, and secondly to revise the style sheet entries that display print text entries within a browser.
34382	Feature Enhancement	Charts		Presentation of charts has been improved	The presentation of charts has been improved in many ways. All charts and fonts are produced with sharper images and with a new background shading option. There are new color palette options. There are also improvements in the placing of legends. Existing charts will display without change, but if you edit the chart and save it, the new options will be applied.

Issue #	Category	Module	Found in Release	Title	Release Note
32579	Product Bug	Charts	4.3.2	Problem saving a pie chart when custom colors had previously been defined	The custom colors were incorrectly saved previously. Now fixed.
33477	Product Bug	Database	4.3.4	Privacy Group Titles were limited to 20 characters	This limitation has been relaxed so 80 characters are now supported
34312	Product Bug	Documentation	4.3.5	The description of get_reports in API Guide was incomplete	The text has been revised and several additional report types have been added to the list
34314	Product Bug	Documentation	4.3.5	The description of get_user in the API and CLI guide had an example with the wrong wildcard character	This has been updated
34405	Product Bug	Documentation	4.3.5	The summary list of API commands in the documentation contained a deprecated entry	There was a command on the summary page for a deprecated API action named UPLOAD. This was removed
32744	Product Bug	General code issues	4.3.4	The english language calendar was displayed in the Advanced Query screen when using Japanese language mode	The popup calendar now correctly selects the calendar based upon the user's locale
32862	Product Bug	General code issues	4.3.4	Problem when setting symbols as the default value of a List field in the data dictionary	Characters such as '<', '&', '@', and others in a default value were not being properly handled. This has been fixed.
33160	Product Bug	General code issues	4.3.4	A user with access to an extremely large number of areas and projects can generate an error when trying to add an attachment	This was caused by ExtraView saving the user's information in an internal temporary table, where the column holding the information was of insufficient width. The column width has been increased to solve the problem
33168	Product Bug	General code issues	4.3.4	Log error showing a syntax error converting the nvarchar value '{DEFAULT}' to a column of data type int	This log entry was innocuous and only seen in SQL Server installations. There was no incorrect functionality.
33443	Product Bug	General code issues	4.3.5	Error in log file when signing on with incorrect credentials	An error was generated in the log under these circumstances. There was no program error, and the error is now caught and discarded, as opposed to generating an error

Issue #	Category	Module	Found in Release	Title	Release Note
33974	Product Bug	General code issues	4.3.5	User lists in an LDAP environment were only working as Popup field lists and not as Select lists	User lists generated from an LDAP server can now be POPUP or Select lists
33230	Product Bug	History	4.3.5	Extra line break tags were displayed within history	These appeared as HTML tags in the text. Now fixed.
33284	Product Bug	Home Page	4.3.4	Exception occurred when the QUERY button was pressed	This was traced to an incorrect behavior setting of CACHE_AREA_PROJECT being set. This is a very little used setting, but the behavior has been modified so that an incorrect setting will not cause an exception
33011	Product Bug	Import and Export	4.3.4	File Import Utility issue: Could not import strings to an ExtraView field where the display type was Day or Html Area	This has been fixed
33092	Product Bug	Import and Export	4.3.5	Error messages in Metadata XML Import were garbled in double-byte languages	Now fixed
33231	Product Bug	Internationalization	4.3.5	The title to the history screen would not appear in a localized language	Fixed
33234	Product Bug	Internationalization	4.3.5	Occasionally, you could update a user role which did not exist, as the IGNORE_USER_GROUP behavior setting	This only happened in non-english locales, and has been fixed
33654	Product Bug	Internationalization	4.3.5	Pop-up help on fields within layout editor could not always be displayed in locales other than English	Now fixed
29914	Product Bug	Layout Rendering	4.3.2	Layout rendering problem on repeating row records that span multiple rows	This problem only occurred with repeating row records that spanned multiple rows (fairly unusual). Now, any number of rows and columns on a repeating row will render correctly.

Issue #	Category	Module	Found in Release	Title	Release Note
33005	Product Bug	Layout Rendering	4.3.5	Could not display a detailed report when there is a DISPLAY_FORMAT layout cell attribute	The invalid layout cell attribute should not have stopped the report from being displayed. Now corrected.
33006	Product Bug	Layout Rendering	4.3.5	It was possible to include an embedded layout on a detailed report, but it would not display	Embedded layouts are not supported on reports, yet it was possible to save one in position on a report layout. Embedded layouts cannot now be included on report layouts to solve the problem.
33377	Product Bug	Layout Rendering	4.3.4	After upgrading from 4.3.2 to 4.3.5, selected embedded layouts may not be rendered properly	In fixing a bug that allowed the improper setting up of "selected" layouts, it became possible to see layouts that would not render, due to their initial improper setting. We relaxed the setting so that these layouts would continue to operate. In the future, we will have a more extensive fix that allows layouts to be set up in a simpler fashion.
33049	Product Bug	Mass Update	4.3.5	When there was only a single issue selected for a mass update, the check/uncheck option would not work	Although this functionality had limited use, it now works correctly
31309	Product Bug	Notification	4.3.3	\$\$USER\$\$ token was not replaced in email template body	Substitution in the email body now follows the same rules as substitution elsewhere, i.e. all special variables are possible and system variables are possible for substitution.
33070	Product Bug	Notification	4.3.5	When " or > is input as the template Name of an Email Template the name would become corrupted on the screen	Although it is very unusual to see these characters in the title of an email template, this behavior is now supported
34455	Product Bug	Notification	4.3.5	Localized values of list fields were not displayed in E-mail notifications	This affected list display type UDF fields and has been fixed.

Issue #	Category	Module	Found in Release	Title	Release Note
29255	Feature Enhancement	Rules Engine		The configuration file used for the rules engine has been moved to be internal to the database	This enhancement ensures that the rules engine will work correctly from within a WAR file deployment, such as is used with the BEA Weblogic environment. The rules will now automatically refresh when updated, as opposed to having to restart the server.
31594	Product Bug	Rules Engine	4.3.4	Problem with the rules engine, with allowed values and popup fields	We found that if there was an Allowed Value between Category and Assigned To fields, then the assignment in the rules engine did not work. The rules file did assign the current user as a value, but the validation rules then removed it.
32538	Product Bug	Search / Report	4.3.4	Not Serializable error appeared in log file	This error was traced to the relatively new functionality of allowing the summation of numeric columns on reports and how the session information was handling these columns. Now fixed.
32628	Product Bug	Search / Report	4.4	An exception occurred when Add Statistics To Report Is selected with blank fields being summarized	There was a "divide by zero" error that has been fixed.
32745	Product Bug	Search / Report	4.3.4	Quicklist report is displayed incorrectly when a new window was opened from the parent screen	If a Quicklist was prepared and displayed in a child window, then the user returned to the main window and prepared a drilldown report, then returned to the Quicklist and refreshed the Quicklist, a blank window was seen. The original Quicklist should have been displayed using a separate child session to be independent, but was not. This has been fixed.
32864	Product Bug	Search / Report	4.4	Home Page Summary reports are not displaying the statistics when these are included in the report definition	This has been fixed
32865	Product Bug	Search / Report	4.3.4	Alignment of the 2D / 3D radio buttons in Chart Attributes was not exact	Now presents the buttons accurately

Issue #	Category	Module	Found in Release	Title	Release Note
32947	Product Bug	Search / Report	4.3.5	Window size on the popup window to save a report not large enough for extremely long report titles	With localized titles allowing up to 3800 characters, the popup window could not accommodate such wide titles. The popup window can now display titles of 100 characters or so. Allowing for more characters leads to a popup window that is unsightly, so this limit will remain
33119	Product Bug	Search / Report	4.3.4	Attachments added to issues through ad-hoc email, evmail and cloned issues to not get added	This problem was spotted within 1 day of 4.3.5 going into production, and this patch release is intended to fix the problem with attachments on ad-hoc emails, cloned issues and issues submitted through evmail.
33242	Product Bug	Search / Report	4.3.5	Search/Report expanded queries with deactivated user could return all users	This has been fixed
33294	Product Bug	Search / Report	4.3.5	Summary reports usings fields where the field name is greater than 26 characters are not displayed properly	This has been fixed so all legal file names (up to 30 characters in length work properly).
33488	Product Bug	Search / Report	4.3.4	Report headers reversed when running a saved column report	Fixed
33823	Product Bug	Search / Report	4.3.5	Detailed Report incorrectly displaying Owner of Comment after the Comment is edited	When a comment was added to a log area field, the edit issue and detailed report correctly display the name of the User who added the comment. After the Comment was edited, the Detailed report incorrectly displayed the name of the user who edited the comment as the one who made the comment. The edit screen still correctly displayed the name of original comment submitter. This has been fixed.
33990	Product Bug	Search / Report	4.3.5	RELEASE_FOUND and RELEASE_FIXED fields do not contain any values in the Advanced mode of the Query screen, when Condensed filters are selected	Now, the complete set of values are populated into the fields, irrespective of whether we are in condensed or advanced query mode

Issue #	Category	Module	Found in Release	Title	Release Note
34146	Product Bug	Search / Report	4.3.5	The database name of INTERFACE cannot be used as a UDF name	This is a reserved name in ExtraView and cannot be used as a name of a UDF. This has been documented.
33657	Product Bug	User Custom	4.3.4	ucAddRefresh not called when changing areas	This is a user custom issue. Now the behavior is that preAddDisplay is called for the first Add screen and for any subsequent change to AREA or PROJECT. The method is called once for the main layout, then twice for each embedded layout during each refresh.
30521	Product Bug	User Interface Issues	4.3.2	SHORT_DESCR required to be on layout for EMAIL button to work	When trying to send an ad-hoc email from the edit screen, there was a requirement to have the SHORT_DESCR field on the edit layout, as this was displayed on the email generation screen. This dependency has been removed, so it is now optional to have the SHORT_DESCR field on the edit layout.
